Symposium Defining, Preventing and Targeting Exacerbations in COPD: towards individualized management

Dear <Mr, Ms,>

Care for patients with COPD is evolving. Instead of focusing on population characteristics, COPD management is becoming more personalized. Heterogeneity and complexity of the disease and its complications are well-recognized and warrant an individualized approach. This applies not only to the chronic care for these patients, but also to acute exacerbations of the disease, which importantly contribute to disease progression, morbidity and mortality. In this exciting one-day symposium, an international panel of experts will highlight the latest developments regarding exacerbations and their individualized management.

We look forward to a very exciting symposium and seeing you in Eindhoven. This symposium will take place before the Bronkhorst Colloquium in Veldhoven.

With kind regards,

Dr. F. (Frits) Franssen, chairman
Prof. Dr. H.A.M. (Huib) Kerstjens, chairman

Program

- 15.00-15.30 Reception
- 15.30-15.45 Opening chairman
- 15.45-16.25 *Re-defining exacerbations in COPD*
Dr. J. (John) Hurst, Senior Lecturer in Respiratory Medicine at UC London, UK
