# Fundamentals of Population Health Management @LUMC Campus The Hague

The answer to this global challenge of population health lies within Population Health Management; being a pro-active approach instead of reactive, broadening its scope of individual interventions with organisational and cultural interventions, and aiming to improve patient and financial outcomes next to clinical outcomes, all based on a risk stratified needs assessment of the population. The Summer School Population Health Management is an inspiring and unique answer to the global challenge in population health and invites highly talented pioneering MSc-/PhD-students.

## Outcome

After completion of the Summer School Fundamentals of Population Health management, you will:

- understand the underpinnings of transformations of value in health care;
- know and apply the distinctive essentials of Population Health Management;
- are able to recognise and formulate the key features of Population Health Management Approach.

After successful completion of the Summer School, you have gained insights in the systematic approach of Population Health Management, you will be able to view current and future healthcare challenges in a broader perspective and have practical experiences that will help you in your future career.

## For whom?

The Summer School Fundamentals of Population Health Management is especially developed to attract high potential MSc- and PhD-students. By offering an inspiring and challenging program we strive for the attendance of 10 international and 20 non-international participants in 2019.

Our main target group is highly talented MSc-students, PhD-students or junior post-docs with a background in (bio-)medicine, public health, epidemiology or data science.

The participants are pioneers, capable of out-of-the-box thinking, and have the ambition to contribute to the global challenge of population health, looking further than their own area of expertise.
