## Sensory Integration in Physical Therapy From perception to treatment

The congress will propose a transversal approach of sensory integration, from neurophysiological bases to patient treatment, through six main themes: childhood and development, aging and adaptations, pain, motor control, virtual world, perception of effort.

ICP 2020 organizes an **educational Pre-Congress**, the friday afternoon (07.02). Scientific update courses and practical workshops will be dedicated to sensory integration. Pre-registration and payment is required in order to secure your place. The official language of the congress is English. French sessions are also planned.
