

## **FASCIAL DECODING | PAOLETTE SERGE DO**

During this course, we will discuss the latest research on the fascia that allow us to push back our therapeutic possibilities

### **PRACTICE**

#### **FIRST PART**

##### **FIRST DAY**

The various fascial technics; applications principles

The observation tests

Technics with great lever

Technics with short lever

Listening technics, induction, treatment

Technics applied to the lower limb with notions of anatomical and physiological pathology and clinical case

##### **SECOND DAY**

Pelvis, specific technical, keys of pelvis

Specific fascial techniques of upper limb and shoulder

The specific techniques on the column

General equilibration of fascia

##### **THIRD DAY**

Fascial techniques in translation adjustment

Techniques of dura mater

Equilibration fascial anteroposterior

Equilibration fascial General

#### **SECOND PART**

##### **FIRST DAY**

Plexus techniques

Discussion on the program before

Transfixing techniques

Techniques of “desideration” and self-corrections

Specific technical applications

On sports

Seniors

##### **SECOND DAY**

The technical possibilities resulting

Factor infertility

The treatment of pregnant women and intra uterine technics

Fascial treatment of babies

This part will take particular account of the notions of memory cell, and epigenetic conception, with many clinical examples and practical demonstration including babies

### **THIRD DAY**

Fascial diagnostic and therapeutic possibilities

Discussion

Future outlook
