Update: The sagittal plane in scoliosis

Scoliosis is often defined as a deformity of the spine in the frontal, or coronal plane, but it actually consists of a rather complex, three-dimensional (3D) deformity of the spine and rib cage, with life-long consequences for the patient.

In this webinar, the important role of the sagittal plane in relation to human spinal biomechanics, will be clarified.

The role of the disc will be explained as the possible key to the problem of both adolescent and degenerative scoliosis, and there will be time for discussion and questions.

SPEAKER

Prof. dr. René M Castelein
MD, PhD, orthopedic surgeon

TIME

17.00 – 18.00 hrs CET, 12.00 – 13.00 hrs EST

MEANT FOR

Everyone interested in an update on scoliosis.

Orthopedic (spine) surgeons, Physical therapists,
Rehabilitation specialists, Paediatricians.

REGISTRATION FEE

€ 50 excl. VAT

ACCREDITATION IS APPLIED FOR

CME credits by EACCME®, KNGF and ADAP

Dutch Scoliosis Center
